

SAFETY VALVES

SAFETY VALVE

3631

- ½" F/F boiler safety valve, 6 bar
- Maximum operating pressure 6 bar
- Temperature range min +5°C – max + 110°C

Safety valves, suitable for pressure control, have several fields of application as safety components for heat generators and hot water accumulators in plumbing, heating and water systems. When the set pressure is reached (value displayed on the plastic protection cap), the valve discharges the exceeding pressure into the atmosphere, protecting the generator and its components. The seat tightness is guaranteed by a EPDM anti-grip seal to ensure inalterability after prolonged use.
